

NATURAL GAS

The CTRM software solution for driving growth

ALLEGRO IS YOUR ADVANTAGE

In the natural gas market, it's not difficult to become overly burdened by the complexity of the industry, considering the need to manage volumes, pipeline capacity and service data. Without a clear and complete view of all that's taking place, schedulers and others are involved in a risky approach whose outcome could be any number of business setbacks.

A solution? A comprehensive commodity trading and risk management software system, such as Allegro. With Allegro, users across the front, middle and back office will have a platform that's made for accuracy, control and efficiency, while simultaneously managing risk and enhancing the potential for growth.

BUILT FOR NATURAL GAS

Allegro's strength is that fact that it streamlines much of the tedious and error-prone aspects of natural gas management. The Allegro solution brings together scheduling and transportation oversight with trading, records and position reporting. In other words, it's a platform that's designed with the entire enterprise in mind. With Allegro, natural gas professionals will find that they have a powerful, yet easy-to-use tool for position visibility, risk management, controls and regulatory compliance - a tool that benefits the entire organization.

TRADING

Customizable templates to improve efficiency and accuracy

Ability to capture trade details in a single repository, streamlining data management

OPERATIONS

Make decisions on pipelines, inventory volumes, long and short positions

Multiple-position scheduling, which helps in nominating volumes

ACCOUNTING

Accurate settlement and invoicing through assigning proper trade prices and fees

Calculation of inventory valuation for accurate accruals

RISK MANAGEMENT

Comparisons against correlated value-at-risk limits for rolling time periods

Ability to perform data integrity checks to confirm position data and parameters
