

NATURAL GAS LIQUIDS

Manage your risk and gain operational control

ALLEGRO IS YOUR ADVANTAGE

As the natural gas liquids market continues to evolve, corporate executives, risk managers, finance officers and compliance professionals have to manage their costs and risk, while ensuring they're capable of responding to changing global requirements.

To do so optimally, they need an advanced software platform that can cope with supply and demand changes in feedstocks, as well as with currency, credit and counterparty exposure. Allegro is the system that's up to the task.

BUILT FOR NGLs

With its capabilities that will benefit the entire enterprise, Allegro is a powerful option for NGL customers, promising position visibility, controls and compliance, while increasing productivity and opening up new profit opportunities. Allegro readily integrates with existing natural gas and crude oil systems, allowing for a full view of operations and risk, and providing users with a complete, modern, extensible commodity risk management system. Spreadsheets and outdated legacy systems simply can't compete with Allegro's innovative approach.

TRADING

Establish appropriate hedging strategies

Capture and confirm both physical and financial trades

OPERATIONS

Gain transparency into logistics across various geographies

See details such as shipper accounts, points, zones, segments and orders

ACCOUNTING

Streamline tracking of transactions and inventory

Track and settle payables and receivables

RISK

Identify and reduce shortage situations with limits and alerts

Automate workflow management to reduce manual errors
