

# BUILT FOR NGL

Optimizing natural gas liquids scheduling requires a holistic view of the business, from the front office, to the middle office and on to the back office. That's exactly what Allegro provides. Allegro is a powerful, intelligent NGL solution, offering position visibility, controls and compliance, while increasing productivity and growth opportunities.

Allegro enables NGL schedulers to make quick decisions for tank, truck, rail and mainline pipelines. Schedulers can easily view inventory volumes to determine if they're balanced, and with a simple interface, match supply volumes to market volumes and create paths for nomination quantities to be submitted to pipelines.

To support faster, more confident decisions, tools such as multiple-position scheduling have been designed to streamline workflows, making it easier to schedule batches within daily deadlines. Plus, users can arrange screen displays exactly as needed to help ensure operational efficiency. Additionally, Allegro automatically assigns appropriate tariffs and fees, while calculating any losses associated with the movement of NGLs.

Allegro's capabilities are enhanced by the manner in which it works with other solutions. Allegro provides direct integration with a number of third-party systems, including enterprise resource planning software, natural gas systems and crude oil systems, producing a complete picture of operations, exposure and risk.

## THE BUSINESS CHALLENGE

Natural gas liquids professionals are increasingly challenged to find better ways to manage positions and logistics movements, monitor inventories and oversee contractual imbalances. Schedulers and traders are required to collaborate effectively to ensure that batches and deliveries are coordinated in the most efficient manner possible.

Meanwhile, executives, risk managers, compliance teams and accountants have to work together to manage ever-changing risk and cost estimates. The best way to do this is with a dedicated, modern commodity trading and risk management software platform that can cope with supply and demand shifts, currencies and exposures in multiple markets. Allegro is that platform.

## THE ALLEGRO SOLUTION

Allegro provides real-time portfolio visibility with physical position management for NGL batching and inventories. By leveraging Allegro, customers can schedule batches with electronic bulletin board-like views, create and manage detailed logistics plans and settle imbalances.

Allegro also fully integrates liquids scheduling and logistics management with trading, accounting, reporting and regulatory compliance. Groups throughout the entire enterprise can streamline workflows, creating business efficiencies, more accurate reporting and better bottom-line results. Spreadsheets and aging proprietary systems simply can't offer the same functionality.

# KEY BENEFITS OF ALLEGRO

Allegro's software is designed to make today's NGL business run the right way. When Allegro's platform is employed, the entire enterprise will work better than it ever has.

## AMONG THE ADVANTAGES OF ALLEGRO ARE:

Optimized storage and inventory management, enabling customers to easily create and manage plans

Workflow functionality that allows users to set messaging and alerts to notify the appropriate users when tolerances have been exceeded

Providing schedulers with up-to-the-minute trade data and the ability to view traded gallons of natural gas liquids as deal entry occurs

Customizable EBB-like views so that schedulers can sort and filter activities by counterparty, tank, truck, rail, pipeline or point

Support for forecasted, planned, scheduled and actual gallons

Tracking of pathed movements, receipts and deliveries

Optimized logistics planning and execution for multiple modes of transportation, including pipelines, trucks, vessels and railcars

Ability to capture storage contracts and generate automated receipt and delivery transactions to account for movements of liquids from the fractionator to the end customer

Capture of logistics data, such as shipper accounts, receipts and delivery points, plant schedules and maintenance schedules

Support for nominations on the entry-exit or the receipt-and-delivery nomination model

Management of imbalances to avoid costly penalties

Assurance of accurate audits, automated P&L reporting and settlements
