

BUILT FOR REFINED PRODUCTS

Allegro is about insight, efficiency and opportunity. By making the move to Allegro, it will mean increased visibility into your refined products business - visibility that wasn't available before, and certainly not with outdated legacy systems or spreadsheets.

Allegro's commodity trading and risk management (CTRM) platform supports both physical and financial trades across the entire spectrum of refined products, distillates, and feedstocks. It also supports complex pricing with multiple price curves, postings, multi-day wraps, and adjustments. This flexibility enables one to engage more effective strategies for marketing, trading, imbalance resolution, and hedging. For refiners and marketers, these strategies can lead to lower feedstock costs, higher refined products prices and wider crack-spreads. These trading strategies can lead to both lower and less volatile fuel costs and minimize the impact of price swings upon your business for refined products consumers.

Allegro's CTRM can help you manage your feedstock logistics and refined products distribution with scheduling that handles all major modes of transportation: pipeline, vessel, barge, rail, and truck. With Allegro's solution, you will know exactly what products and volumes are distributed at the truck and rail racks, loaded on barges and vessels, sent via pipeline, or remain in inventory. For consumers and distributors of refined products, logistics and inventory can be tracked all the way to the point of consumption.

Allegro also has a full set of accounting functionality with transactions being tracked from the counterparty level down to individual costs for specific trades and logistical movements. Allegro's inherent support for multiple currencies and units of measure enable actualization, settlement, and invoicing related to your crude oil business, regardless of where in the world it occurs.

THE BUSINESS CHALLENGE

The dramatic growth in domestic crude oil production and the associated increase in truck and pipeline-based logistics to deliver production to market has significantly added to the amount of data being exchanged by upstream, midstream and downstream companies.

In fact, energy companies may routinely deal with thousands of truck, rail and barge movements simultaneously. All of this can be managed, and there are many different ways to do it. But with that said, some approaches, such as Allegro, are far better than others.

THE ALLEGRO SOLUTION

Allegro enables both refined products companies and major consumers of refined products to analyze and manage a host of business activities including trading, contracting, scheduling, credit, and risk. Additionally, Allegro's CTRM solution is built for integrated crude oil companies, producer services, midstream, gas, NGL, and refining. The benefit of using a single comprehensive platform eliminates the need for additional systems or spreadsheets.

When Allegro's CTRM is integrated with Allegro Connect interface, components, logistics, prices, and accounting data all seamlessly flow in and out of the system. This integration increases the effectiveness and efficiency of your operations even beyond the substantial improvements to be gained from core Allegro products.

KEY BENEFITS OF ALLEGRO

Allegro has been constructed with the requirements of the front, middle and back office in mind. With this being the case, the system's many benefits will cross departments and desks, connecting the entire enterprise.

AMONG ALLEGRO'S CAPABILITIES ARE:

Automated import of logistics tickets, like truck tickets and inventory balances, from major logistics data aggregators

The ability to import and create logistics movements from T4 Pipeline Schedules and update those movements from T4 Pipeline Schedule Updates

The ability to import T4 truck tickets and associate those truck tickets with scheduled logistics movements

The ability to import DTN TIMS station logs and DTN TABS truck tickets and associate the TABS truck tickets with scheduled activities
