

BUILT FOR COMPLIANCE

Allegro knows all about the compliance requirements of the world's commodity buyers, sellers, producers and consumers. After all, we have more than 30 years of experience providing our powerful software platform that's made for the unique needs of these companies.

We understand that they simply can't fail to comply with the operating rules of the markets in which they operate. However, to see that they run their businesses and processes the right way, they need the right technology. That's what our software is - the commodity management solution with compliance functionality for the 21st century. With Allegro, both the number and impact of mistakes can be vastly reduced, and reporting becomes more streamlined, owing to capabilities that can't be matched by aging systems and spreadsheet-based approaches.

Allegro is made to replace what had been ineffective and time-consuming with a new way of doing business. That way is dependable and repeatable, and it means users can devote less time to worrying about compliance errors and more time on productive, revenue-driving opportunities.

THE BUSINESS CHALLENGE

For the commodity companies of today, meeting the host of regulations and mandates surrounding their businesses requires the proper management of a tremendous amount of data, which originates from various sources, systems and departments. Overseeing the complex tasks that go into achieving compliance can be overwhelming, while regulatory shifts around the globe can lead to ever-greater strain on resources.

To cope with multiple layers of reporting and an increasingly challenging set of operating rules, companies must ensure that they have the internal controls and data transparency to meet their requirements. They also need a solution that provides the appropriate flexibility for the future, since reporting rules undoubtedly will continue to change. But if they're using spreadsheets or aging in-house systems, there's a considerable likelihood they simply don't have the right technology to feel confident in their compliance functions.

THE ALLEGRO SOLUTION

What's best for today's regulatory environment? A dedicated commodity trading and risk management solution, such as the system from Allegro. With Allegro, users will have a software platform that's made for compliance and that's built to evolve along with the demands on their business.

Allegro is designed to see that customers comply with the regulations in any market. For instance, if the need is to comply with key rules such as ASC 820, IFRS 9 or IAS 39, Allegro's software is prepared. Thanks to its automated reporting tools and integration with multiple regulatory bodies, Allegro will reduce the stress that users face when trying to remain compliant, as well as the time and the costs of doing so.

KEY BENEFITS OF ALLEGRO

The best way to view Allegro is to see it as a single, intelligent platform for managing compliance requirements. While Allegro has numerous tools for commodity professionals, compliance is among the most important.

AMONG THE BENEFITS OF ALLEGRO ARE:

Simplified data collection processes and improved accuracy of compliance operations

Flexible functionality, which allows companies to easily adapt and comply with future requirements

Aggregation of all the information necessary to complete FERC forms, reducing the probability of audits and errors

Easier report generation, such as one-click capability to produce the appropriate file formats for FERC Form No. 552 and FERC EQR requirements

Incorporation into all of the current business processes that are supported by the Allegro solution

Streamlined extraction and compilation of transactional natural gas and electricity data

Automatic formatting prior to data being submitted to regulators
