

BUILT FOR CRUDE OIL

Allegro's commodity risk management software is designed to provide users across the crude oil landscape with a complete, detailed perspective on their physical and financial positions. By doing so, we intend to enable far greater insight and allow for much sounder decision-making than any alternative approaches.

With Allegro, you'll identify and resolve imbalances, owing to our functionality for setting limits and alerts. You'll benefit from automated workflows, which will vastly reduce mistakes and misunderstandings. You'll better manage all of your business processes. You'll have a tool that's set up to help you confidently cope with regulatory mandates in numerous geographies, and you'll simplify your accounting and settlement procedures. How can one system do all of this? The answer is that Allegro, for more than three decades, has been at the forefront of innovation in commodity trading and risk management. We've seen multiple economic cycles, and we've seen the extraordinary change that has altered the way our customers operate.

Our software is engineered for the very professionals who work throughout the crude oil space and who need a solution that's meant to address the opportunities and the challenges of the 21st century. Allegro is built for visibility, up-to-the-minute intelligence and working smarter than ever. Allegro, in short, is the solution for crude oil.

THE BUSINESS CHALLENGE

The dramatic growth of domestic crude oil production, along with the associated increase in truck and pipeline-based logistics to ensure new output reaches the market, has significantly boosted the amount of data being exchanged by producers, midstream companies and refiners.

In fact, a downstream company may routinely find itself having to oversee the logistics for thousands of truck and rail movements, multiple pipelines and even barges. The means a tremendous quantity of information is being collected, shared and analyzed within and among departments and business partners. Keeping up with it in today's extraordinarily complicated market simply can't be done efficiently with spreadsheets or aging software systems that were made for another era.

THE ALLEGRO SOLUTION

However, there is a way to effectively deal with the complex world in which you operate – Allegro's commodity trading and risk management software platform. With Allegro's capabilities for crude oil, including Crude Oil Connect, you can focus on collecting all of the volumetric, commodity and logistics records that are generated each day.

Crude Oil Connect improves operational efficiency for carriers, midstream companies, refineries and customers by automating many of the traditionally labor-intensive tasks that are associated with the oil business. For instance, with Allegro and Crude Oil Connect, you'll collect and enter data such as truck tickets, carrier statements and pipeline statements, significantly reducing workloads on your staff, while at the same time boosting the accuracy and timeliness of your data.

Plus, because it's part of the broad Allegro family, Crude Oil Connect integrates seamlessly with our crude oil, refined products and producer services functionality, creating a comprehensive offering for the crude sector's needs.

KEY BENEFITS OF ALLEGRO

With Allegro, your teams across the front, middle and back office will benefit. Our 30-plus years of experience in the commodity realm means that we've learned what makes crude oil companies work best.

AMONG THE KEY ATTRIBUTES OF ALLEGRO'S CRUDE OIL CONNECT ARE:

Simpler loading of logistics tickets, such as truck tickets and station logs, by directly connecting to T4 and DTN, including DTN TABS and DTN TIMS

Automatic retrieval of data elements to increase logistical visibility

Streamlined processing of truck and logistics data output using XML from both T4 and DTN

Support for pipeline scheduling and nominations, including the ability to create nominations, change nominations and receive nominations
